Project Title

Team_member 1, Team_member 2, ...

November 7, 2024

1   Introduction

Introduce the application in this section. After reading this section, the reader should understand what the application is about.
Note:

- In this template, all italic text should be removed and replaced with your own text (which should not be italic); the italic text is just a placeholder letting you know what to write there.

- If you use Figures or Tables, please make sure to give each one a caption and a figure/table number and refer to them from the main text!

- References should be provided where applicable.

2   Application Description

2.1   Application System

Depict the fundamental structure of the application system in this section. After reading this section, the reader should understand the components of the application system and their relations and/or the interactions between them.

2.2   Technical Details

In this section you also should include the information of the data sources utilized in the application, the ontolog(ies) [1] used/developed if there are, particular method(s)/technique(s) if there are, and tool(s)/librar(ies) are used to develop the application.

2.3   Application Usage

In this section you should present the functionalities of the application using several use cases.

3   Discussion

Discuss the lessons you learned from the project and the possibilities and limitations of the theories and technologies learned from this course.
